

Request for Proposal: DOM 01-24 Front Load Bear Resistant Bins

Question #1

Can you provide clarification on the applicable amount for the provincial environmental tax levy, if any, associated with this project?

This does not include a Provincial Environmental Tax Levy.

Question #2

We understand the intricate timeline involved in crafting custom bins, estimating a production duration of 6-10 weeks, and a subsequent 2 business days for delivery to the site. Could you shed light on the anticipated project start date to help us align our logistics seamlessly?

The district will receive a New Front Load Garbage Truck in April of 2024. The bins will need to be here in April or by the end of May 2024 in order to be able to use the truck.

Question #3

Will the bins be centrally dropped off at one location, or are there multiple drop-off points we should be considering in our logistics planning?

The bins will have to be delivered to the District Public Works yard at 10 Cicada Drive in Mackenzie, BC.

Question #4

Understanding your preferences is crucial for us to deliver precisely what you envision. Could you share your preference for bin lids – plastic or metal?

The district is looking for Bear resistant metal bins with metal lids

Question #5

While we offer spray painting services for the bins, we are curious if there are specific colour preferences for the project. Are color options flexible as long as uniformity is maintained across all bins?

We prefer it if the bins are all white.
